

KYMETA Features

Fixed and mobile platforms now have access to connectivity that leverages the best of satellite regardless of location. Stay connected anywhere, anytime and experience the easiest mobility high throughput.

- High Capacity & Powerful Satellite Communications
- KYMETA Antenna in Ku-Band offer reliable communications
- Transportable & Automatic activation
- Super Easy to Install on both Vehicle, Maritime & Fixed
- Electronic beam forming
- Easy to Configure and align with Satellite

About KYMETA

New generation Ku-Band Antenna

This solution is design for the next generation of mobile connectivity.

Kymeta antenna is unlocking the potential of satellite, to offer solutions that are low-profile, lightweight, easy to install, and virtually maintenance free.

- Robust** : Hardened and tested to work in land-mobile and maritime environments.
- Easy** : Satellite technician not required for installation, setup, commissioning and provisioning.
- Reliable** : Solid state electronically steered antenna, no gimbals, no motors required.
- Agile** : Fast tracking, on-the-move connectivity supports mobile broadband.

KYMETA - Keep Passengers Connected:

- Keeps luxury coaches, public transit and school buses connected no matter where they go.
- LOW MAINTENANCE & REAL-TIME DATA**
Our low-profile, low maintenance connectivity solutions deliver real-time data connectivity

KYMETA - Maritime

- EFFICIENT & CONNECTED ALWAYS** :
Operational costs are decreased. The high-speed access Kymeta provides the ability to monitor remote offshore energy platforms via live video feeds and obtain real time data and analytics.
- Mobility on the water /sea is now a reality.
- LOW MAINTENANCE & LIGHTWEIGHT** :
Easy, High speed connectivity from Kymeta means tracking fishing fleets, scheduling crew members, and managing harvests.

KYMETA - Government

- LOW PROFILE, LOW POWER** :
Kymeta antenna range help in environment and field operations where deployment and high mobility are critical factors.
- ALWAYS CONNECTED** :
You get connected quickly with minimal configuration from everywhere.
- FAST & RELIABLE** :
Connectivity is readily available when the electrical grid is destroyed and cellular service is unreliable or non-existent, such as in natural disasters.
